PROJECT DESCRIPTION

I. GENERAL

This project involves the modification of the existing traffic control signal at the intersection of MD 210 (Indian Head Highway) and Livingston Road/E. Swan Creek Road in Prince George's County, Maryland. MD 210 is considered to run in a north/south direction.

II. INTERSECTION OPERATION

The intersection presently operates in a NEMA six (6) phase, full-traffic-actuated mode. There are exclusive left turn phases for both the north and southbound movements of MD 210. The MD 210 through movements operate concurrently. The Livingston Road/E. Swan Creek Road movements operate concurrently.

The existing eight phase, full-traffic-actuated, solid state digital controller with intersection monitor and harness, and battery back-up will be relocated to a new base mounted cabinet with seven 4-channel rack mounted time delay output loop detector amplifiers.

The existing phasing is to be modified to operate in a NEMA six (6) phase, full-traffic-actuated mode. There will be exclusive left turn phases for both the north and southbound movements of MD 210. The MD 210 through movements will operate concurrently. The Livingston Road/E. Swan Creek Road movements will operate as a side street split.
